PROFILE

Computer Engineering student and software developer who builds and ships complete applications across frontend, backend, database, and deployment. Led a 4-member team to a Top 28 finish among 500+ ideas at LJ Innovation Village 2026, then rebuilt the platform solo over 3 months across 195 commits. Experience spans full-stack web development, REST API design, real-time systems, machine learning, and applied computer vision. Seeking a full-time software engineering internship in Ahmedabad, available immediately for 6+ months.

EDUCATION

LJ Institute of Engineering and Technology, Ahmedabad

B.E., Computer Engineering | CPI: 7.45 | Expected May 2028

PROJECT EXPERIENCE

[WORKIZO — Real-Time Home Services Marketplace](#) | Team Lead to Solo Developer | 2026

- Originated the concept and led a 4-member team to selection in the Top 28 of 500+ startup ideas at LJ Innovation Village 2026; progressed to Startup Week 2026 for mentorship with founders and investors.
- Rebuilt the platform solo over 3 months across 195 commits: a React frontend with three role-based interfaces (customer, professional, admin) and protected routing, a Django REST Framework backend, and a MySQL database.
- Implemented live booking dispatch over Django Channels and WebSockets, pushing requests to available professionals in real time with instant status sync across all three dashboards.
- Built an automated KYC pipeline (OpenCV, EasyOCR, regex validation) that extracts and format-checks Aadhaar and PAN fields at onboarding, feeding an admin approve/reject queue.
- Developed an itemised billing engine computing labour and spare-part line items into invoices, with Razorpay (test mode) and cash settlement paths and SMTP receipts.
- Secured all portals with JWT authentication; configured Pyright and Pyrefly static type checking across the backend.

Stack: React, Django REST Framework, Django Channels, Python, MySQL, JWT, OpenCV, EasyOCR, Razorpay API, Gmail SMTP

[BOXY — Multi-Stop Parcel Delivery Platform](#) | Solo Developer | 2025

- Designed and built a Flask and MySQL delivery platform supporting multi-parcel, multi-stop bookings, where one booking fans out to N parcels and N destinations across a 7-table normalised schema. 137 commits.
- Implemented three role-based workflows (customer, delivery partner, admin) with a stateful pipeline tracking each stop independently from pickup through completion.
- Built responsive frontend interfaces with JavaScript and Bootstrap, including dynamic forms that add and remove parcel and destination fields at runtime.
- Built email OTP authentication over SMTP with expiry and retry limits; integrated Razorpay (test mode) alongside a cash-on-delivery confirmation flow.

Stack: Python, Flask, MySQL, JavaScript, Bootstrap, HTML, CSS, Razorpay API, SMTP

OTHER SOFTWARE PROJECTS

[Cattle Health & Milk-Yield System](#) | Machine Learning + Full-Stack | 2025

- Built at a 48-hour hackathon: a Flask REST API serving scikit-learn Random Forest models for milk-yield regression and four-class health classification, with Pandas and NumPy feature processing over SQLite.
- Extended into a full-stack monitoring dashboard with React, Node.js, Express, and MySQL; deployed on Vercel.

[DevBrain AI](#) | In Progress | 2026

- Building an AI-assisted tool to help developers understand unfamiliar codebases, using Django REST Framework and ChromaDB for vector-based code search with LLM integration.

[Nomads Cafe Management System](#) | Java Application | 2025

Cafe operations management system in Java applying object-oriented design principles, with JDBC connectivity and a MySQL backend.

SKILLS

Languages: Python, Java, JavaScript, SQL, HTML, CSS

Frontend: React, React Router, Bootstrap, Responsive Design

Backend: Django, Django REST Framework, Django Channels, Flask, Node.js, Express

Data & ML: scikit-learn, Pandas, NumPy, Matplotlib, ChromaDB (vector search)

Databases & Tools: MySQL, SQLite, Relational Schema Design, REST APIs, WebSockets, JWT Authentication, OpenCV, EasyOCR, Git, Razorpay API, SMTP, Vercel

CERTIFICATIONS

Exploratory Data Analysis for ML — IBM • Data Structures in Java — UPenn • HTML, CSS & JavaScript — IBM (Coursera)
